

# Case Study: Global Pharmaceutical Company

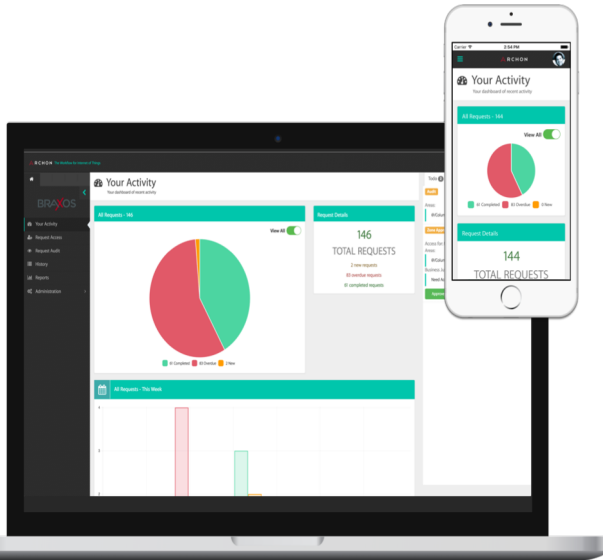

Saving A Global Pharmaceutical Company time & money  
Automate room access requests & auditing procedures

## The Business Need

A multi-national pharmaceutical corporation came to braXos with a significant challenge. Both their physical room access requesting and subsequent auditing process was manual and laborious. They wanted a way to make it easy for individuals to request access to a room and to track who has access to each room so they can meet compliance requirements. Enter braXos' Archon software.

## Enter braXos

braXos created Archon to simplify the access request and audit process for the Pharmaceutical company. Archon integrates with the security access control system so when a new access request is made the request will automatically populate in the security system. Archon logs all of the requests and changes so that when it is time to create a report on room access at the end of the month the administrator user can easily click on a room and download a document in PDF or excel form. The company also tracks requests on a mobile app platform

Practice Area  
Pharma & Biotech  
Service Offering  
Ease of Use

## braXos Delivers:

- Easy access requesting, granting, and denying
- Quickly generate audit reports to meet compliance requirements

- Time saving to the security & IT teams allowing them to focus on protecting the company

Reduce paper usage  
From thousands of  
Audit documents per  
Month to under 100.

Cut audit report generation  
time down from 8-10 hours  
per audit to 2-4.

Automated removal of physical  
access when an audit occurs or  
a termination request is made.
